

TEAM CAMEO CREW

ResQMind AI

AI-Powered Flood Intelligence & Autonomous Relief Coordinator.

Plan. Protect. Adapt.

Made with GAMMA

THE RESPONSE GAP

Flood response is more than flood detection

Information is fragmented across citizens, weather stations, sensors and field officers.

Reports can be duplicate, outdated, unreliable or conflicting, making critical incidents hard to identify.

Boats, ambulances, rescue teams and relief supplies are limited; roads and shelters change continuously.

Core problem: making reliable, timely and adaptive decisions throughout a flood emergency.

Made with GAMMA

THE PLATFORM

Introducing ResQMind AI

A centralized AI-powered flood intelligence and relief coordination platform.

1

Collect & verify

Bring together multi-source information, detect duplicates and estimate flood risk.

2

Prioritize & allocate

Rank incidents, optimize rescue resources and recommend safe routes and shelters.

3

Monitor & replan

Track operations and dynamically replan as conditions change.

4

Coordinate decisions

One intelligent platform. Multiple coordinated decisions. Adaptive flood response.

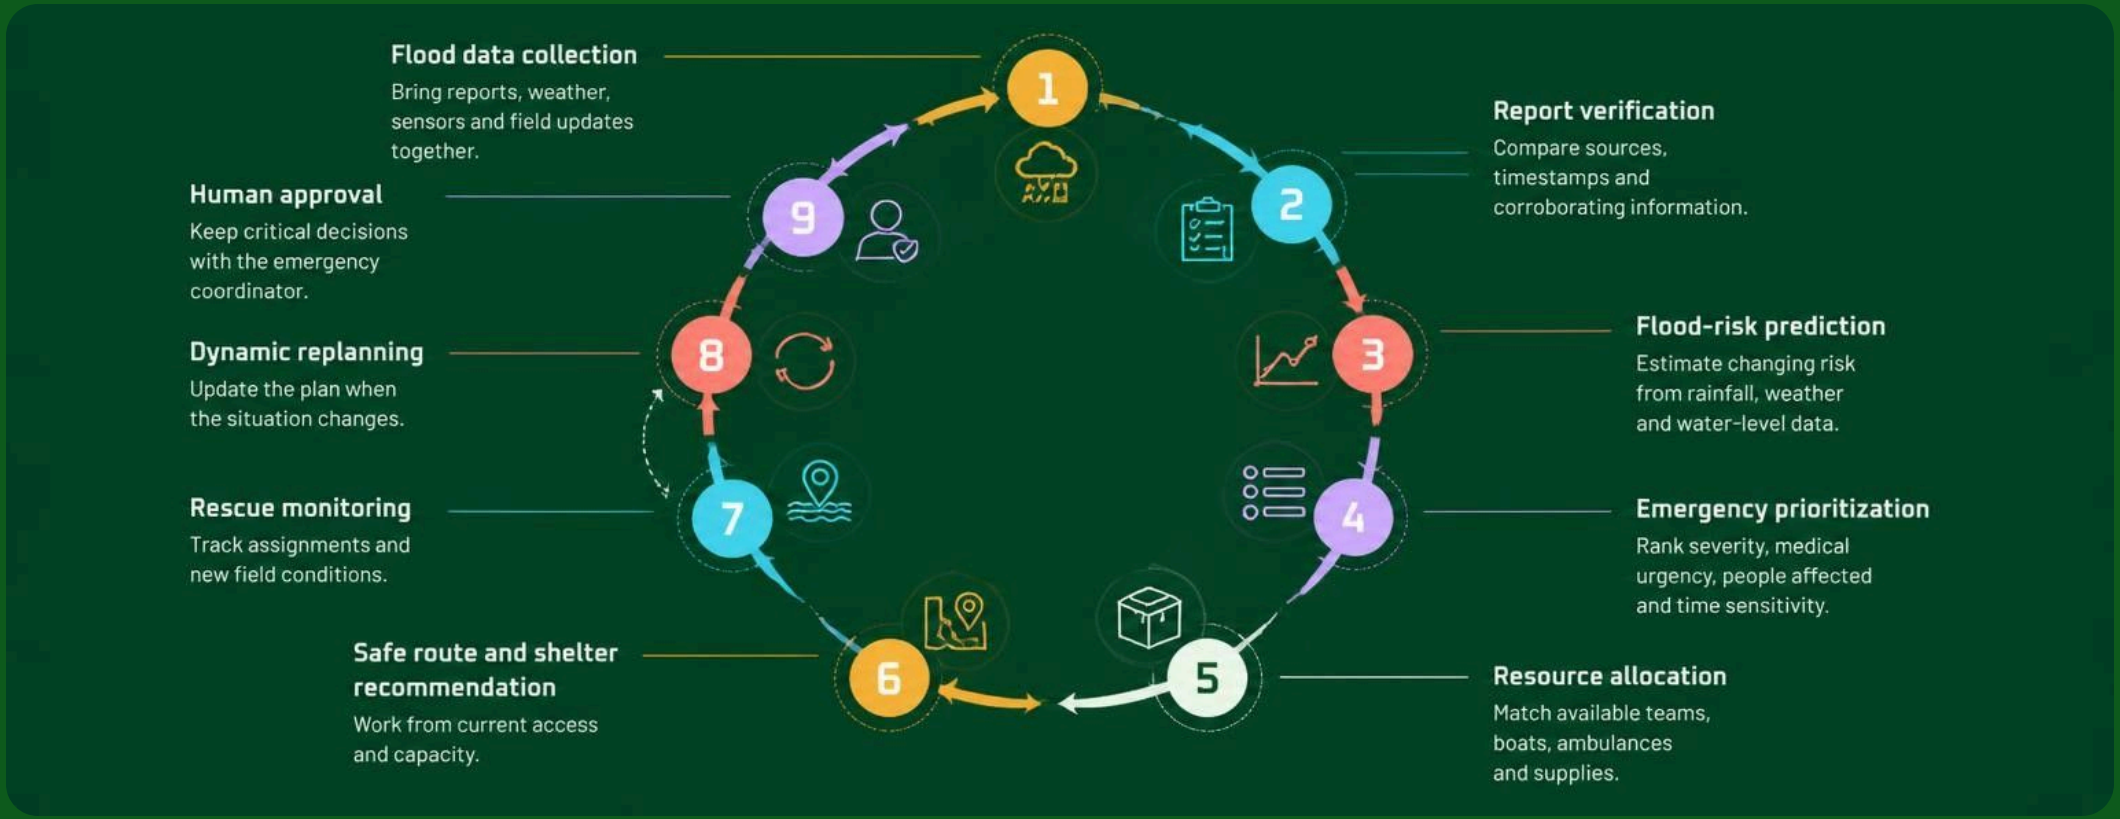

Central intelligence layer

Made with GAMMA

THE OPERATING LOOP

From flood information to coordinated action

A nine-stage workflow keeps response moving, with monitoring feeding dynamic replanning and human approval.

The loop turns changing information into coordinated action without removing the emergency coordinator from critical decisions.

Made with GAMMA

DECISION INTELLIGENCE

Intelligence behind every decision

NLP + Sentence Transformers

Identify similar and duplicate emergency reports even when wording differs.

Reliability assessment

Use timestamps, source reliability and corroborating information to flag reports for verification.

XGBoost

Estimate potential flood risk from relevant historical and current rainfall, weather and water-level data.

Intelligent prioritization

Surface critical incidents by severity, medical urgency, people affected and time sensitivity.

Guardrail

AI does not independently prove reports true. Uncertain but potentially life-threatening reports require urgent human verification.

Predict. Prioritize. Verify.

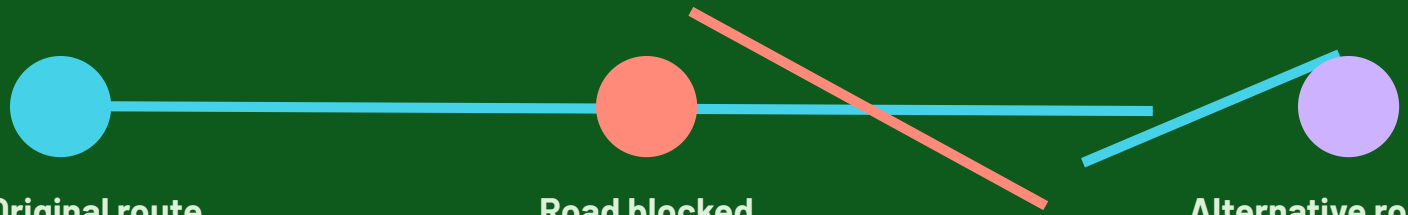

Made with GAMMA

THE DIFFERENTIATOR

Flood-aware dynamic replanning engine

The differentiator: ResQMind AI continuously adapts the relief plan as flood conditions change.

Updated condition received and verified

Original route
Accessible

Road blocked
Rising water

Alternative route
Highlighted

Replan loop · remove road · recalculate · request approval

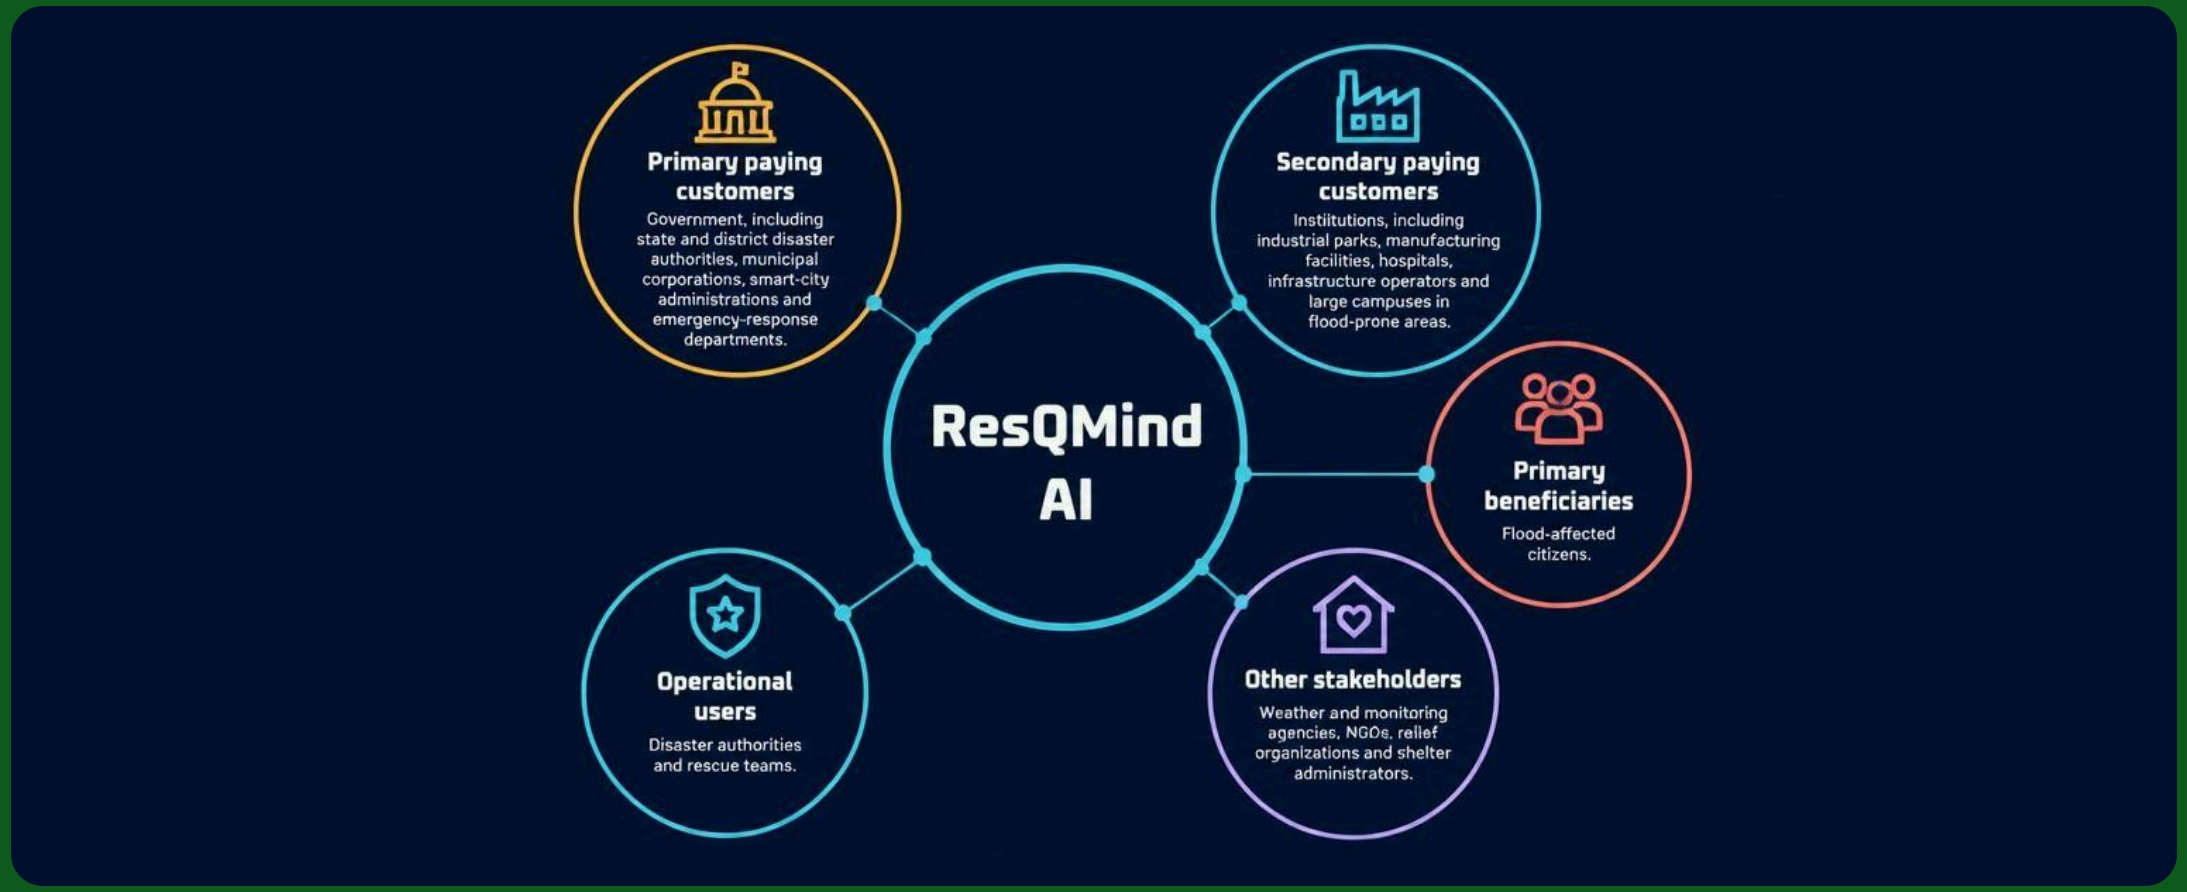

NetworkX calculates an alternative route on the supplied road network. OR-Tools can re-optimize resource assignments when required. The revised plan goes to an emergency coordinator for approval.

Made with GAMMA

CUSTOMERS & USERS

Who needs ResQMind AI?

Paying customers fund the platform. Operational users act through it. Flood-affected citizens benefit from better-informed response.

Made with GAMMA

PROPOSED BUSINESS MODEL

A scalable B2G + B2B SaaS business model

B2G

Government organizations

Subscribe for flood intelligence and emergency coordination.

B2B

Institutions

Subscribe for flood preparedness and emergency coordination.

SAAS

Recurring subscriptions

Annual subscriptions rather than a one-time software purchase.

1

Customers

Government & institutional customers

2

Subscription

Annual SaaS subscription

3

Platform

ResQMind AI

4

Service

Flood intelligence & coordination services

5

Outcome

Better-informed emergency operations

Proposed opportunity: citizens are beneficiaries, not necessarily paying customers. Pricing and adoption are proposed opportunities, not established contracts.

Made with GAMMA

SUSTAINABILITY PATH

Turning innovation into a sustainable business

Proposed revenue streams

- Annual government subscriptions
- Institutional subscriptions
- Implementation and integration fees
- Premium analytics and operational reporting
- Training, technical support and maintenance contracts

Proposed customer journey

1 **Identify**

Flood-prone districts and institutions

2 **Demonstrate**

Demonstrate

3 **Pilot**

Pilot deployment

4 **Evaluate**

Evaluate operational metrics

5 **Annual subscription**

Annual subscription

6 **Expansion**

Expansion through institutional collaboration

Keep all revenue and acquisition claims explicitly proposed; do not invent customers, partnerships or performance results.

Made with GAMMA

THE VISION

Building a more adaptive future for flood management

Scale

Pilot in one flood-prone district, expand to multiple districts, then connect wider state-level and regional flood-management networks.

Structure

Cloud infrastructure, software development and maintenance, data integration and processing, mapping services, cybersecurity and data protection, technical support and training.

ResQMind AI — Plan. Protect. Adapt.

Thank You — Team Cameo Crew.
